Architecture

Badrgo — system architecture

Each service owns its database. TCP for request/response, Kafka for domain events, ClickHouse for analytics.

Stack

NestJS 11 · TypeORM 1 (Postgres 16) · Kafka (KRaft) · ClickHouse 24 · Redis 7 · JWT auth · nestjs-i18n · Swagger · Jest + Supertest

Getting started

```
cp .env.example .env                                # then set JWT_SECRET_KEY
docker compose up -d                                # postgres + redis + kafka + clickhouse
npm install

npm run start:user                                  # HTTP 3001 · TCP 4001
npm run start:wallet                                # TCP 4002
npm run start:report                                 # HTTP 3003 (probes) · TCP 4003
npm run start:gateway                                # HTTP 3000
```
